Nemaslug®
Biological slug killer

- Effective natural control
- Compatible with organic gardening
- Easy to use, just add water

Refrigerate on receipt. Adhere to the Use By Date.
Treats up to 100m² and lasts up to 6 weeks.

For best results:
- Always use in accordance with instructions.
- Upon receipt, use immediately or store in a refrigerator (do not freeze).
- Do not use product beyond Use By Date.
- Use the entire packet at one time, do not store stock solution.
- Keep the nematode suspension agitated, as nematodes settle out quickly.
- For outdoor/glasshouse/polytunnel applications use when slugs are active and soil temperature is consistently above 5°C.
- Avoid applications in bright sunlight.
- Apply in the evening or in dull conditions.
- Ideally apply during rainfall.
- Soil or substrate must be moist before and for at least 2 weeks after application.
- One application will provide control for up to 6 weeks, for continued protection re-apply at this time.
- Infected slugs stop feeding quickly and die below ground within 4 – 21 days.

See inside sleeve for further information.
Nemaslug®

Biological slug killer

Slugs are generally active when plants start growing and soil temperature is over 5°C. Young slugs tend to stay underground, feeding on decaying organic matter, developing unseen and waiting for young seedlings to be planted. They breed all year round with two overlapping generations. Peak egg laying is Mar – Apr and Sept – Oct.

Using the biological power of nematodes to protect your plants

- Nematodes are naturally occurring microscopic worms, already present in the soil.
- Increasing nematode numbers in the soil helps to reduce pest populations.

How nematodes work:

- Our specially selected nematodes attack slugs by entering their bodies through the breathing pore.
- Once inside, they reproduce in huge numbers, making the slugs terminally ill.
- Soon after a slug has died, a new generation of hungry nematodes disperses to hunt down further slugs.
- When nematodes can no longer find slugs, they will die back to their original numbers.

Application by garden hose applicator

Add half of the contents of the pack to the bowl of the feeder. Fill the bowl with water, mix thoroughly until fully dispersed and attach the hose. With the feeder in an upright position, apply evenly to half of the area using a side-to-side motion. Application will take approximately 8 minutes (on Variable spray Miracle-Gro® Feeder set spray to ‘flat’) under standard water pressure conditions. Repeat the above procedure with the other half of the contents of the pack to treat the other half of the area. To make sure the nematodes are adequately watered in, treat the same area again for a further 8 minutes if treating a vegetable patch or 16 minutes if treating a lawn. Applications to lawns require more water to wash the nematodes through the grass thatch.

Application schedule

To maintain the effectiveness of your slug control programme you should re-apply Nemaslug® at least every 6 weeks when the soil temperature is suitable. Display this calendar, in your shed or greenhouse marked with the date of each subsequent treatment and order your next pack in good time.
